

Axel Van Dyck

QA Engineer | Cypress & JavaScript Automation | E2E & Manual Testing

QA Engineer with experience in manual and automated testing strategies and execution using Cypress and JavaScript, focused on product quality, early risk detection, and a culture of shared ownership throughout the SDLC. Experienced in cross-functional collaboration with development, product, and stakeholder teams to ensure reliable deliveries aligned with business objectives.

TECHNICAL SKILLS

QA & Testing Strategies:

Shift-Left Testing; design and execution of E2E, SIT, UAT, BVT, Smoke, Regression, and Exploratory Testing; test case management in Azure DevOps, documentation, and defect tracking.

Automation:

E2E test automation using JavaScript and Cypress; Specs organization, scripting, front-end selectors, YAML pipeline configuration for execution and adaptation of automated test suites, Build Validation Testing (BVT), test suite maintenance, test debugging, and Git workflow. Familiar with Selenium WebDriver, Selenium IDE, and Postman..

Tools & Collaboration:

VS Code, Azure DevOps, Git, GitHub, CMD, PowerShell, Git Bash, Jira, Freshdesk, and Generative AI tools. Collaborative work with development, product, and stakeholder teams.

Web & Mobile Testing:

Testing of SaaS, web, and mobile applications (iOS & Android), including functional validation and user experience verification across multiple devices and browsers.

Adaptability & Languages:

Highly adaptable to new tools, frameworks, and testing processes. Fluent English (C1).

PROFESSIONAL EXPERIENCE

QA Engineer (Automation & Manual Testing) | ALSET Inc. | 2024 – Present

- Served as the primary QA resource across multiple SaaS, web, and mobile (iOS & Android) projects, driving SIT and UAT coverage, defect tracking, and product stability with a high degree of ownership and autonomy.
- Develop and maintain end-to-end automated tests using JavaScript and Cypress for web applications, integrating test validations into CI/CD workflows before and after deployment to improve release reliability and test coverage.
- Implemented test stabilization strategies including selector optimization, flaky test management, and backend cold-start mitigation, improving automation reliability and reducing false-positive results.
- Contributed to the implementation and evolution of automation frameworks by organizing test suites, refining specifications, and improving execution efficiency for Smoke Testing, Regression Testing, and Build Validation Testing (BVT) within GitHub-based workflows.
- Integrated automated HTML reporting into pipeline validation processes, improving test result visibility, failure analysis, and overall quality insights throughout the delivery lifecycle.
- Collaborate closely with development and product teams throughout the SDLC, participating in functional reviews, early-stage validations, and stakeholder demonstrations in both English and Spanish.

TECHNICAL EXPERIENCE | PROJECTS

SprintLine E2E Automation Framework | Alset

Cypress · JavaScript · Azure DevOps · CI/CD · Azure Storage

- E2E automation for an AI-powered platform focused on technical documentation generation; 33 automated scenarios, validation time reduced from ~50 minutes to ~9 minutes (**~82%**), and 10 technical challenges successfully resolved.

BrandHub – E2E Automation Framework | Alset

Cypress · JavaScript · Azure DevOps · CI/CD · Azure Storage

- End-to-end test automation for a branding platform, integrated into Azure DevOps pipelines for Build Validation Testing (BVT) and regression testing; automated 36 test scenarios, reduced validation time from ~45 min to ~5 min, and 7 technical challenges successfully resolved.

Automation Infrastructure Standards | Alset

Cypress · Azure DevOps · YAML Pipelines · Mochawesome · CI/CD

- Designed and implemented technical standards for automated test execution in Azure DevOps, including automated reporting, environment variable management, pipeline adaptation, and multi-browser execution strategies.

Urban Routes Taxi Booking Automation | TripleTen

Python · Selenium WebDriver · Pytest · Page Object Model (POM)

- Automated the end-to-end transportation booking workflow using Selenium WebDriver and Pytest, including route selection, payment processing, SMS confirmation, and application state validation following the Page Object Model (POM) architecture.

Portfolios: Complete documentation including metrics, technical challenges, implemented solutions, code snippets, and visual evidence of final results:

ADDITIONAL EXPERIENCE

English & Science Teacher | Colegio Elbrus | 2022 – 2024

- Designed assessment rubrics, evaluation processes, and performance tracking systems focused on measurable outcomes and continuous improvement.
 - Implemented development programs and performance analysis initiatives using metrics and ongoing evaluation.
 - Developed strong communication, documentation, and organizational skills while working in dynamic, results-driven environments.
 - English Instructor | Planet English, Fast English y Step-Up Consultants | 2018 – 2024
 - BackOffice Agent | Microsoft – Grupo Novandi | 2018
 - Technical Support Agent | AIFA Project – Soporte 911 | 2016
 - Literacy Instructor | Project JCF – IHEA Hidalgo | 2019 – 2020
-

CERTIFICATIONS | EDUCATION

- **Quality Assurance Engineering** – TripleTen 11/2024
- **EF English Certificate** | C1 LEVEL - 2/2024 | **TOEFL ITP** | Score 583
- **Cambridge Teaching License Certificate** - 8/2021 | **Humanistic Psychology Studies** | UHH – 2019 (Incomplete)
- **Microsoft Virtual Academy**

Technical Support Certificate awarded for proficiency in system maintenance and technical troubleshooting.

- **Cambridge University Press**

Flipped Learning Recognition for implementing digital platforms, AI tools, and gamification strategies to enhance language acquisition.
