

Axel Van Dyck

QA Engineer | Cypress & JavaScript Automation | E2E & Manual Testing

QA Engineer with experience in manual and automated testing strategies and execution using Cypress and JavaScript, focused on product quality, early risk detection, and a culture of shared ownership throughout the SDLC. Experienced in cross-functional collaboration with development, product, and stakeholder teams to ensure reliable deliveries aligned with business objectives within Agile/SCRUM teams.

TECHNICAL SKILLS

QA & Testing Strategies:

Shift-left testing, design and execution of E2E, SIT, UAT, BVT, smoke, regression, performance, load, stress, and API testing; test case management, documentation, and defect tracking in Azure DevOps.

Test Automation:

E2E testing with JavaScript and Cypress, including selector handling, scripting, and test suite organization. CI/CD integration through YAML pipelines for Build Validation Testing execution. Debugging and maintenance of automated test suites. Familiar with Selenium WebDriver and Selenium IDE.

Tools & Stack:

VS Code, Azure DevOps, Git / GitHub, CLI, Cypress, Postman, K6, JavaScript, TypeScript, Markdown, Jira, GitHub Copilot, Freshdesk, AI tools.

Web & Mobile Testing:

Testing across SaaS, web, and mobile applications (iOS & Android), including functional and business rule validation, as well as user experience evaluation across multiple devices and browsers.

Adaptability & Languages:

High adaptability to new tools, frameworks, and testing processes. Fluent English (C1 level).

PROFESSIONAL EXPERIENCE

QA Engineer (Automation & Manual Testing) | ALSET Inc. | 2024 – Present

- I lead QA activities across multiple SaaS, web, and mobile (iOS/Android) projects, including the design and execution of testing strategies, SIT and UAT coverage, defect tracking, and maintenance of test cases and functional documentation.
- I develop and maintain E2E tests using JavaScript and Cypress for web applications, integrated into CI/CD pipelines for validation in pre- and post-deployment stages, increasing regression coverage and release reliability, while reducing execution time and error analysis
- I implement test stabilization strategies and handle flaky tests, including selector optimization and backend cold start mitigation, significantly reinforcing suite reliability and reducing false positives.
- I actively participate in the evolution of automation frameworks, organizing automated test suites and optimizing specs within GitHub workflows, which increases efficiency in the execution of smoke, regression, and Build Validation Testing.
- I implement automated HTML report integration in CI/CD pipelines, improving result traceability, test observability, and accelerating failure analysis during the delivery cycle.
- I actively participate in the SDLC with development and product teams, conducting functional and business rule reviews, as well as product demonstrations to stakeholders in both English and Spanish.

SprintLine E2E Automation Framework | Alset

Cypress · JavaScript · Azure DevOps · CI/CD · Azure Storage

- E2E automation suite for an AI-powered platform focused on technical documentation generation; 33 automated scenarios, validation time reduced from ~50 minutes to ~9 minutes (**~82%**), and 10 technical challenges successfully resolved.

BrandHub – E2E Automation Framework | Alset

Cypress · JavaScript · Azure DevOps · CI/CD · Azure Storage

- End-to-end test automation for a branding platform, integrated into Azure DevOps pipelines for Build Validation Testing (BVT) and regression testing; automated 36 test scenarios, reduced validation time from ~45 min to ~5 min, and 7 technical challenges successfully resolved.

Automation Infrastructure Standards | Alset

Cypress · Azure DevOps · YAML Pipelines · Mochawesome · CI/CD

- Standardization of automated test execution within the existing pipeline architecture, enabling environment configuration, execution evidence generation, and the onboarding of new Cypress test suites through a reusable and scalable integration model.

Portfolio: Complete documentation including metrics, technical challenges, implemented solutions, code snippets, and visual evidence of final results:

ADDITIONAL EXPERIENCE

- **English & Science Teacher | Colegio Elbrus | 03/2022 – 09/2024**
 - Design and standardization of assessment rubrics to track academic performance across multiple groups.
 - Analysis and documentation of academic results to ensure structured performance tracking and progress monitoring.
 - Communication and coordination with students and academic teams in high-workload, fast-paced environments.
- English Instructor | Planet English, Fast English y Step-Up Consultants | 2018 – 2024
- BackOffice Agent | Microsoft – Grupo Novandi | 2018 (12-month contract)
- Technical Support Agent | AIFA Project – Soporte 911 | 2016 (6-month project)
- Literacy Instructor | Project JCF – IHEA Hidalgo | 02/2019 – 04/2020

CERTIFICATIONS & TRAINING

- **Quality Assurance Engineering | TripleTen | 04/2024 - 11/2024**
 - Web, Mobile, & API testing, test case design, defect analysis, SQL, Postman, automation frameworks & scripting.
- **Microsoft Virtual Academy**
 - Technical Support Foundations - Troubleshooting, system support, and problem resolution.
- **English C1 — EF English Certificate | TOEFL ITP Score: 583 | 02/2024**
